

Dear Ms. Alexander,

Regarding the request for comments on the Internet Assigned Numbers Authority (IANA) Functions, kindly find the answers of some questions,

A1 : Based on the experience gained by IANA the last years, it will be more reasonable to maintain the current functions to be done by IANA. IANA functions should be continued to be treated as interdependent. This will save time, money and risks in moving some functions to another entity.

A2: There is no need to include the IANA functions' contract the references to a variety of different entities working with IANA within the internet technical community. Separate MoUs or SLAs between IANA and these entities with full details will give more flexibility to add or remove any details at any time.

A3: Any change required to be done regarding the processes of any function done by ICANN has to be discussed and developed through ICANN community.

A6: The contract has to include general statement which enforces IANA in the way of working on all new security technology with any responsible entity. But this should not include any details regarding how it can be done or with whom IANA should coordinate. This can be developed case by Case.
